

NAME: A Wrote Paper - 2005 - Sample

- ① The Power On Self Test is a system test carried out by the PC when first turned on. It enables the computer to determine which devices are attached and functioning and can report these to the operating system.
- ② It's infinite. When one disk fills - replace it!
- ③ CTRL-ALT- BACKSPACE
- ④ Change the 3rd line of the login dialog from the domain name to the local machine name.
- ⑤ Opera, Mozilla, Firefox
- ⑥ The CLI (command line interface) is accessed via the terminal. (Reahlat / Utilities (Terminal))
- ⑦ `mkdir <directory name>`
`rm dir <directory name>`
- ⑧ It is a centralised Windows database. It controls all aspects of the operation of the hardware & software.
Manually editing the registry may lead to errors and aspects of the system may no longer function reliably.
