

NAME

CPANPLUS::Module::Fake

SYNOPSIS

DESCRIPTION

A class for creating fake module objects, for shortcut use internally by CPANPLUS.

Inherits from CPANPLUS:: Module.

METHODS

```
new( module => $mod, path => $path, package => $pkg, [_id => DIGIT] )
```

Creates a dummy module object from the above parameters. It can take more options (same as CPANPLUS::Module->new but the above are required.
